

# Managed Antivirus

A feature available with N-able RMM

Protecting your system against viruses is like dealing with a moving target. Once an antivirus program learns how to block known malware, a new, unknown threat suddenly appears to infect your workstations and servers.

The managed antivirus capabilities in N-able™ RMM can help your system proactively stay ahead of both known and emerging malware threats. Managed Antivirus not only keeps your network's security up-to-date with protection against the latest known threats via traditional signature-based protection, but also protects against new viruses through sophisticated exploratory checks and behavioral scans of your system.

## Block known and emerging malware

- **Signature-based scanning:** Extensive, signature-based threat detection works to block all known threats
- **Heuristic checks:** Protect against previously unknown threats using heuristic checks, which detect unrecognized viruses in a sandbox environment, away from systems that run the business
- **Continuous, real-time monitoring:** Ongoing scans of your system help detect programs that perform behaviors and actions commonly associated with malware exploits

## Minimize resources needed for threat prevention

- **Lightweight scans:** By reducing the size of scans, system resources can maintain high performance levels
- **More accurate scanning:** More precise scans can help reduce the number of false positives
- **Scheduling options:** Schedule deep scans for off-hours, so you don't disrupt employees during important productive times

## Control more of your virus protection

- **Default policies:** Save time by using our default policies for servers, desktops, and laptops
- **Customization:** Create your own policies by modifying factors, such as quarantine rules, exclusion settings, and definition update schedules
- **Better control:** Depending on your system needs, you can pause or cancel scans
- **Easy rollout:** Deploy Managed Antivirus in bulk across sites, servers, and workstations
- **Endpoint branding:** Personalize Managed Antivirus to include your company name, website, and support details
